

# New Hospital Visitor Policy to Reduce the Spread of Coronavirus

To address the highly contagious COVID-19 Omicron variant, and to protect our patients, visitors and staff, visits to hospitalized patients are temporarily suspended.

Exceptions to this policy may apply when:

- + visit is medically-necessary and essential to the patient's care
- + patient is in an end-of-life situation
- + patient is receiving Labor & Delivery services
- + patient is an infant in the neonatal ICU, or a minor
- + patient has a developmental or cognitive disability
- + patient needs other support

For these exceptions, the visitor must show proof of vaccination or have a negative COVID-19 test result issued in the last 48 hours.

Visitors who show COVID-19 symptoms, or may have been exposed to someone with COVID-19, will not be permitted.

**If you need a COVID-19 test or vaccine, our patient navigators can direct you to our testing or vaccination clinics today.**

# New Outpatient Clinic Visitor Policy to Reduce the Spread of Coronavirus

To protect our patients, visitors, and staff, we have new visiting guidelines:

- + One person is allowed to accompany each patient to an appointment
- + Special aides or assistants will also be allowed at the same time, if required
- + Visitors who show COVID-19 symptoms, or who may have been exposed to someone with COVID-19, will not be permitted.
