  • Booster Doses for People Ages 12 and Older
  • One-Third the Strength of the Adult Dose

Available at any of our hospitals

With COVID-19 and flu season occurring together, it is more important than ever to protect yourself and your children from getting sick.

COVID-19 and flu vaccines are safe and highly effective in reducing risk of illness, hospitalization and even death.

Your children can get a COVID-19 vaccine and the flu shot at the same time with no out-of-pocket cost to you.

Learn more about which vaccine is right for you. Scan the QR code or call 1-844-NYC-4NYC (1-844-692-4692).

Who Should Get Vaccinated for Flu and COVID-19?

Influenza (Flu) Vaccine
Everyone six months and older should get a seasonal influenza (flu) vaccine each year, especially:
+ Children under 2
+ People over 65
+ People who are pregnant or recently gave birth
+ People with medical conditions like diabetes, asthma, heart disease or HIV
+ Essential workers, including health care workers and caregivers of people that are at a higher risk of getting sick. Those who care for children, especially infants younger than six months, should also get the flu vaccine.

COVID-19 Vaccine
Most individuals are now eligible to get a COVID-19 vaccine:
+ People aged 5 to 11 can get two pediatric doses (one-third strength) of Pfizer-BioNTech
+ People aged 12 and older can get two doses of the Pfizer-BioNTech vaccine

Additional Primary Series Doses of Pfizer COVID-19 Vaccine
Additional primary series doses are available to people who got their second dose of COVID-19 vaccine at least 28 days ago and have a weakened immune system due to a condition or treatment. These may include:
+ Active treatment for cancer
+ Organ transplant and medicine to reduce the strength of the immune system
+ Stem cell transplant within the last 2 years
+ Moderate or severe primary immunodeficiency
+ Advanced or untreated HIV
+ Active treatment with a high dose of corticosteroids or other drugs that moderately or severely weaken the immune system

You must be 5 or older to get the Pfizer additional primary series dose. Additional primary series doses are not recommended for most people with other medical conditions such as diabetes, heart or lung disease.

COVID-19 Booster Dose - Pfizer and Moderna Vaccine Recipients
Everyone 12 years or older should get a booster shot at least 5 months after receiving the second dose of their primary Pfizer COVID-19 vaccination series.

People ages 12-17 who previously got the Pfizer primary series more than 5 months ago are eligible for the Pfizer booster shot only.

People who are 12 or older and immunocompromised should get a booster shot at least 3 months after receiving the additional dose of their primary Pfizer COVID-19 vaccination series for a total of 4 doses.

Hospitals in the NYC Health + Hospitals system offer Pfizer and J&J vaccines. NYC Health + Hospitals/Gotham Health sites offer Moderna vaccine. For a full list of locations, visit our website: nychealthandhospitals.org
