Available here to all who are eligible

With COVID-19, it continues to be important to protect yourself and loved ones from getting sick.

COVID-19 vaccines are safe and highly effective in reducing risk of illness, hospitalization and even death.

You can get a COVID-19 vaccine with no out-of-pocket cost to you.

Who Should Get Vaccinated for COVID-19?

- + Children ages 6 months to 4 years can get three pediatric doses (one-tenth strength) of Pfizer-BioNTech
- + Children ages 5 to 11 can get two pediatric doses (one-third strength) of Pfizer-BioNTech
- + Children and adults 12 and older can get two doses of Pfizer-BioNTech
- + Adults 18 and older can get two doses of Moderna, or one dose of Johnson & Johnson/Janssen

Additional Primary Series Doses of Pfizer

Additional primary series doses of an mRNA vaccine are preferred for people who have a weakened immune system due to a condition or treatment.

Additional primary series doses are not recommended for most people with other medical conditions such as diabetes, heart or lung disease.

Who Should Get a COVID-19 Booster Shot?

The updated COVID-19 vaccine boosters are recommended for everyone 5 and older who received their most recent vaccine dose at least two months ago.

The updated Pfizer booster is recommended for everyone 5 and older, and the updated Moderna booster for everyone 6 and older. You can choose which booster to get.

Immunocompromised people who received J&J as a first dose and an mRNA vaccine at least 28 days later as an additional dose should get a booster dose of an mRNA vaccine at least two months after the additional dose of mRNA vaccine, for a total of three doses.
