

Gain first hand experience working in the **nation's largest municipal healthcare system**.

Support **transformative action** bridging climate and health.

Collaborate with **experts** in public health, sustainability, emergency management, and special pathogens.

Climate Health Internship

The NYC H+H Special Pathogens Program is proactively preparing for climate change.

Interns can expect to:

- Support planning, preparedness, and response activities related to climate health and special pathogens.
- Conduct literature reviews on climate health topics, including vector-borne illness, extreme weather events, and more.
- Develop educational materials for clinicians, healthcare workers, and the general public.
- Participate in climate-related drills and exercises.
- Collaborate across the program, including within the Central Office of Emergency Management.

Diverse educational backgrounds **welcome**.

Applications accepted **year-round** on a rolling basis.

Preference given to experience in **health, environmental studies, and medicine**.

Contact: Sarah Brown, Climate Health Project Specialist, System-wide Special Pathogens Program, Central Office Emergency Management browns77@nychhc.org

To apply, submit the following:

- Resume
- Statement of interest
- Proposed timeframe of internship and time commitment per week.
