

# Climate Health Internship

Gain first hand experience working in the **nation's largest municipal healthcare system**.

Support **transformative action** bridging climate and health.

Collaborate with **experts** in public health, sustainability, emergency management, and special pathogens.

## Participants can expect to:

- Support planning, preparedness, and response activities related to climate health and special pathogens.
- Conduct literature reviews on climate health topics, including vector-borne illness, extreme weather events, and more.
- Develop educational materials for clinicians, healthcare workers, and the general public.
- Participate in climate-related drills and exercises.
- Collaborate across the program, including within the Central Office of Emergency Management.
- Support the System-wide Special Pathogens Program and other infectious disease threat related projects.
- Provide administrative support from an 'all-hazards' approach to emergency management related activities

Diverse educational backgrounds **welcome**.

Applications accepted **year-round** on a rolling basis.

Preference given to experience in **health, environmental studies, and medicine**.
